### BIOLOGICAL ACTIVITY

Description	Apigenin-7-glucuronide could inhibit Matrix Metalloproteinases (MMP) activities, with IC <sub>50</sub> s of 12.87, 22.39, 17.52, 0.27 μM for MMP-3, MMP-8, MMP-9, MMP-13, respectively.

In Vitro	Apigenin-7-Oglucuronide could inhibit Matrix Metalloproteinases (MMP) activities, with IC <sub>50</sub> s of 12.87, 22.39, 17.52, 0.27 μM			

for MMP-3, MMP-8, MMP-9, MMP-13, respectively [1]. Scutellarin A also inhibits the migrated capacity of ACHN and 786-O cells in a dose-dependent manner. It is also revealed that after treatment with Scutellarin A (30, 60, and 90  $\mu$ M) for 24 h, the apoptosis rates in ACHN and 786-O cells are remarkably enhanced dose-dependently when compared to the control groups [2].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
